I'm a pre-final year student at **International Institute of Information Technology, Hyderabad**. I'm pursuing my **B.Tech (Hons) in Computer Science** and **MS by Research in Computational Humanities**. My primary interests lie in the field of Software Development, Data Science and Machine Learning.

I am a fast learner, a passionate developing enthusiast and I love solving problems; be it tinkering with designing a model or simply developing programs and breaking the code. I have a good amount of full stack development and data science experience. I have also interned at American Express, UK where I gained a complete agile product experience with back-end development, front-end development, UX, product planning, design sprints, user-testing, alpha-testing and product pitches.

As a student who is doing his major in Computer Science, I have undertaken lots of projects that taught me how to be a team player who constantly thrive on improving the project or the task at hand. I learned how to work in a team and handle large amount of codebase; be it contributing to an existing code, refactoring the code, using trackers to keep records of issues and manage them. As part of my Master's credits, I have also gained experience in fields like Ontology, Web 3.0, Sociology and Confluence of Humanities and Computer Science.

The diversity in different fields that can be explored as a software developer inspires me to pursue it as a career option. In the past three years I have gathered a decent amount of exposure and proficient experience in projects dealing with Python, R, C/C++, HTML/CSS, Bash and JavaScript. Along with my courses, I was appointed as a Teaching Assistant for IT Workshop 1 and 2 offered to undergraduate students, consecutively for two semesters. I took up course on Natural Language Processing to hone my skills and strengthen my foundations in the area of my research field. I thoroughly enjoyed the course which helped me gain a good introduction to Sentiment Analysis. Along with my academics, I have also interned at the prestigious Indian School of Business and startups focussing on cyber security, Authbase and data analytics, Lumata Digital.

I am confident that my aptitude and relevant background would bring a high level of energy and enthusiasm to your program.

Forwarding my CV for your kind consideration for this program. Looking forward to your positive response.

Sincerely,
Devansh Manu
